

# What is the most valuable take-away from this session?

Testing

Shifting from an IOT mindset to a generative AI mindset in NPD/M&A

Integrating human with generative AI; inclusion in data governance models

Framing of the conversation

Experiment now at a marginal cost!

Bias and compounding bias - e.g., starting point for GO in humans vs machine only

Generative AI models are really good at intrapolating, not as good at extrapolating

Identify a specific use case in order to take the abstract concept of Generative AI and focus it on a specific domain.

Ensembling generative AI with other forms and technologies

# What is the most valuable take-away from this session?

chat gpt is "the world's most sophisticated auto complete"

See where this tech fits within your industry and develop better prompts and better fine tuning to provide better use case. Utilize ChatGPT for workforce training.

Balance is needed to move with the speed to remain competitive while managing risk of accuracy to reach full potential impact.

« Generative AI allows for marginal cost experimentation »

The practical application discussions have me insights on how I can apply generative AI in my company

The power of chatGPT should not be underestimated in any context, but most of all in how to optimize the time and productivity of workers and what humans will do in the work lives, and how that is supported and developed in this era

# What is the most valuable take-away from the day overall?

Micro generational segments

Recognition of educated incapacity

Compression of R&D and strategic planning cycles and the need to change and adapt more frequently because everything around us is being fast tracked.

For me generative so self-learning constructs was interesting

Lifelong forgetting as a concept and the importance of critical thinking

The competency tree with roots

Pace of change may be a historical theme but "feels" at a tipping point. Robust and durable vision and thought flexibility are key

Thinking about data governance to support future AI applications

Really appreciated the AI conversation this morning. Was future-thinking and also yet covered the near- and long-term discussions of application.

# What is the most valuable take-away from the day overall?

Think different, without natural baggage we carry.

Time/Truth/Trust as core values

Creating ensembles around generative AI and rapidity of emergence of AI paradigms

Marginal cost experimentation enabled by generative AI

The speed and scale of AI growth, and how it will lead to multiple new job families and the diminishment of many others.

Possible usages of generative AI for-Better Prompts-Better fine tuning-Better Ensembling

Embrace the unknown around what technology (AI) may do and offer and how can it become many thing, chief among them a tool for efficiency and how labor is distributed against work. And ethics is a powerful piece that needs a dedicated person

# One words check-out
